

Enabled Port Ranges

Ports Enabled in the ACL API

At AppNexus, we have predefined several port ranges for the networking devices responsible for firewalls. We recommend adjusting your software to use those ranges (for example passive FTP could be easily set to use ports 40000 – 41000). If your software can't be reconfigured and you want to use some other port range, please open a support ticket at <https://portal.appnexus.com/> or by sending an email to support@appnexus.com.

Available Ports
512–1023
1000–2000
7000–7100
10000–20000
27998–28100
29000–40000
40000–41000
